# DM5490/DM7490A, DM7493A Decade and Binary Counters

#### **General Description**

Each of these monolithic counters contains four masterslave flip-flops and additional gating to provide a divide-bytwo counter and a three-stage binary counter for which the count cycle length is divide-by-five for the 90A and divideby-eight for the 93A.

All of these counters have a gated zero reset and the 90A also has gated set-to-nine inputs for use in BCD nine's complement applications.

To use their maximum count length (decade or four-bit binary), the B input is connected to the  $\mathsf{Q}_\mathsf{A}$  output. The input count pulses are applied to input A and the outputs are as

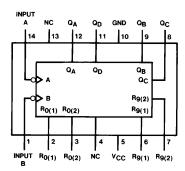

described in the appropriate truth table. A symmetrical divide-by-ten count can be obtained from the 90A counters by connecting the  $Q_{\rm D}$  output to the A input and applying the input count to the B input which gives a divide-by-ten square wave at output  $Q_{\rm A}.$ 

#### **Features**

- Typical power dissipation
  - \_\_90A 145 mW
- 93A 130 mW
- Count frequency 42 MHz

#### **Connection Diagrams**

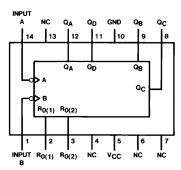

#### **Dual-In-Line Package**

TL/F/6533-1

Order Number DM5490J, DM5490W or DM7490AN See NS Package Number J14A, N14A or W14B

#### **Dual-In-Line Package**

Order Number DM7493AN See NS Package Number N14A TL/F/6533-2

#### **Absolute Maximum Ratings (Note)**

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage 7V
Input Voltage 5.5V
Operating Free Air Temperature Range

Storage Temperature Range  $-65^{\circ}\text{C}$  to  $+150^{\circ}\text{C}$ 

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

### **Recommended Operating Conditions**

| Х            | L     | L     | Х     |       | COL     | JNT     |         |

93A Reset/Count Function Table

| Reset Inputs |       | Outputs |         |         |         |  |
|--------------|-------|---------|---------|---------|---------|--|
| R0(1)        | R0(2) | $Q_D$   | $Q_{C}$ | $Q_{B}$ | $Q_{A}$ |  |
| Н            | Н     | L       | L       | L       | L       |  |
| L            | X     | COUNT   |         |         |         |  |
| Х            | L     | COUNT   |         |         |         |  |

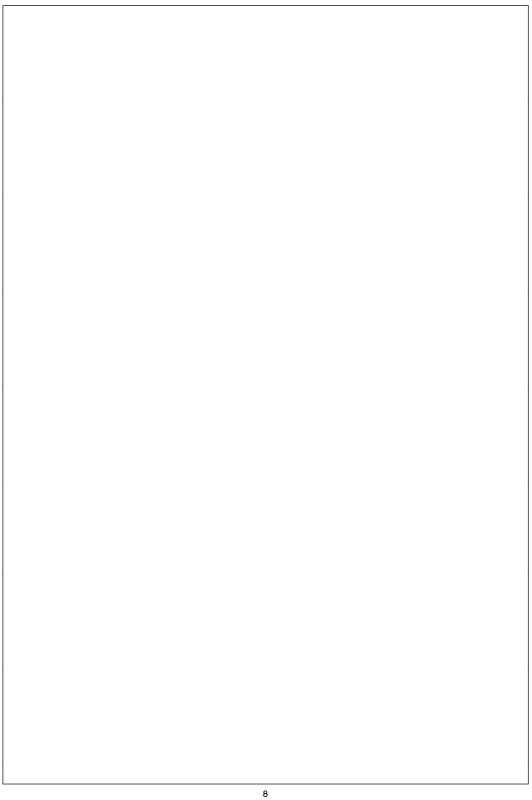

Note A: Output Q<sub>A</sub> is connected to input B for BCD count.

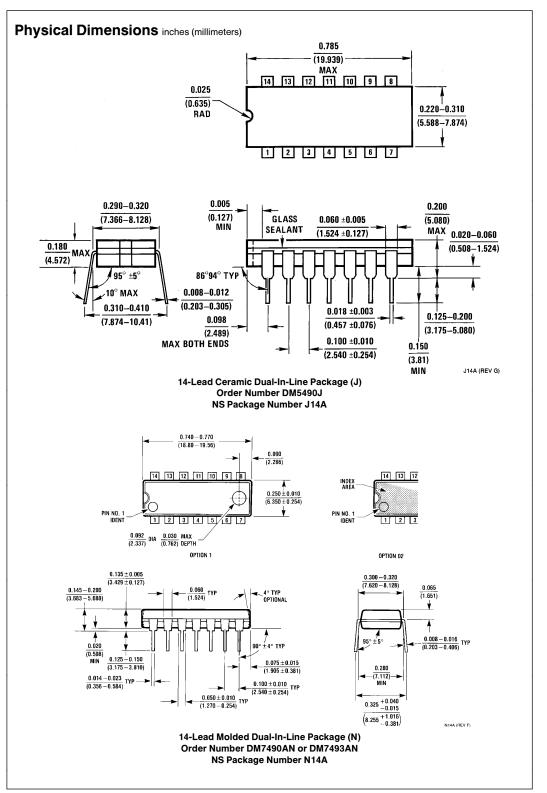

Note B: Output  $\mathsf{Q}_\mathsf{D}$  is connected to input A for bi-quinary count.

Note C: Output QA is connected to input B.

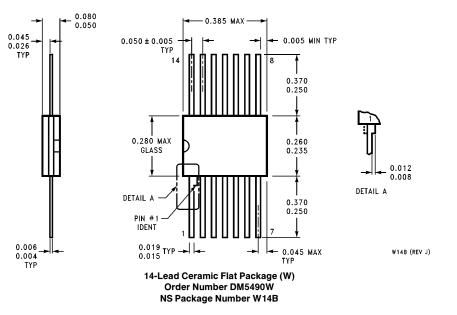

Note D: H = High Level, L = Low Level, X = Don't Care.

#### LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

- 1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
